 murtazasaleem2004@gmail.com

I am a dedicated web developer with experience in building and maintaining dynamic web applications. I specialize in utilizing modern technologies like ES6, React, and Tailwind CSS for creating responsive and visually appealing frontends. For backend development, I use Express.js and Node.js to deliver scalable and efficient solutions, complemented by my expertise in managing data with MongoDB. I am proficient in black-box testing using Postman to ensure application reliability and performance. To facilitate seamless collaboration, I utilize Git and GitHub for version control, ensuring project success through efficient teamwork.

In addition to development, I am skilled in deploying applications on platforms like Vercel for the frontend and Render for the backend. My knowledge extends to DevOps principles, networking, shell scripting, and working with Ubuntu environments, which equips me to handle various aspects of the development lifecycle. I am passionate about delivering user-friendly solutions, achieving compatibility targets, and consistently exceeding expectations. As an intern, I am eager to contribute to organizational goals, tackle new challenges, and further enhance my skills through practical experience.
